WE DO WET KITS

We can set up your tractor with a wet line kit to operate your trailer, whether you need a single acting or double acting wet kit. We build our kits with name brand parts, and our trained technicians are experts at what they do.

- Bypass relief for longer pump life.
- Guaranteed to work
- Cab controls mounted either in console or on dash.
- We can expand the scope of work to include electrical lift axle switches and tarp cab controls

You will always know that when we are on the job, your equipment will simply work.

WET LINE, SWITCHES AND CONTROL DISCLAIMER

Please note our trailers have specialized interfaces for controlling the hydraulic, air and electrical components. WESTERN has invested considerable effort into parts, tooling and training to be able to setup your equipment to go to work without incident. For a quote on installing a wet kit for your trailer to function properly, call (801) 466-4977. Our installation will include all hydraulic hoses, valves, switches and other components for your trailer to function properly prior to delivery.

Should you decide to setup your equipment yourself or send your equipment to a 3rd party shop, please be advised:

- All components provided by the factory come equipped on the trailer. Additional valves, hoses, switches and other components can either be purchased from us or must be provided by your installer.
- The operating requirements (oil capacities, flow rates, plumbing and electrical diagrams) can be found in your new trailer manual.
- All trailers are checked out prior to delivery. The hydraulics are operated, tubs are dumped, tarps are opened and closed, axles are lifted, air bags are dumped. If you have decided to have your wet line and electrical kits installed elsewhere and there is a problem, we will be happy to take care of it for you, but you will be charged repair and diagnostic fees.
- Please do not have 3rd party shops call us asking us for additional parts or specialized knowledge. Our trained experts would be more than happy to install your wet kit for you, but are not able to train other shops in the installation process.
- Western Truck and Trailer Sales Inc. assumes no responsibility for a third party wet kit or wiring installation
